SELF-CLOSING FAUCETS.

"MOORE'S PATENT."

PATENTED JUNE 17th, 1879

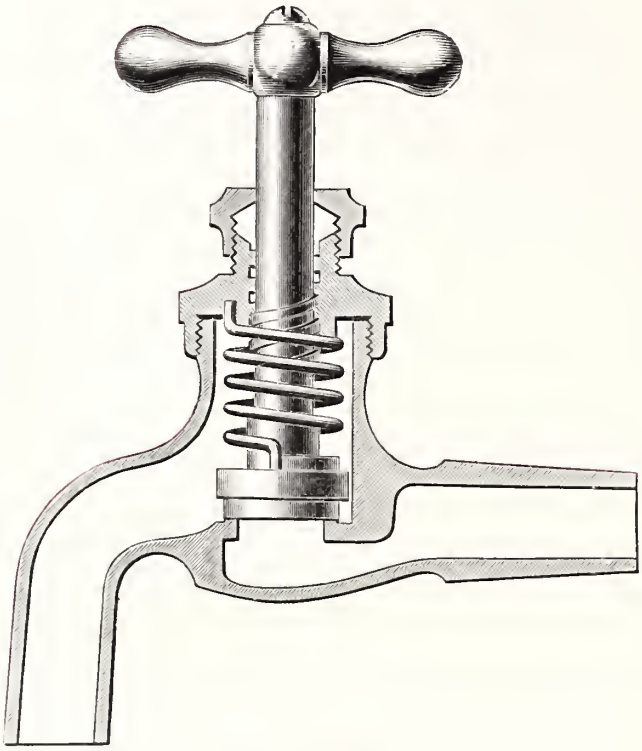

Fig. 396.

For Simplicity and Durability MOORE'S PATENT SELF-CLOSING FAUCETS have no equal in the market.

The valve is closed against the pressure of the water by a spiral spring, made of the best PHOSPHOR BRONZE SPRIN WIRE. This spring is secured at its upper end to the cap, and its lower end to the valve, thus aiding to rotate the spindle at the same time it forces the valve to its seat. The cap is made with LEFT-HAND screw, to prevent any liability of unscrewing in opening the Faucet. The operating screw being below the stuffing box is constantly lubricated by the passing water; and all the parts combined, made and put together in the best possible manner, produce a faucet quick and positive in its action, and cannot be excelled.

For Prices of MOORE'S PATENT SELF-CLOSING WORK, (not Illustrated) see page 241.

ANTI-WATER HAMMER.

Patented March 6th, 1883.

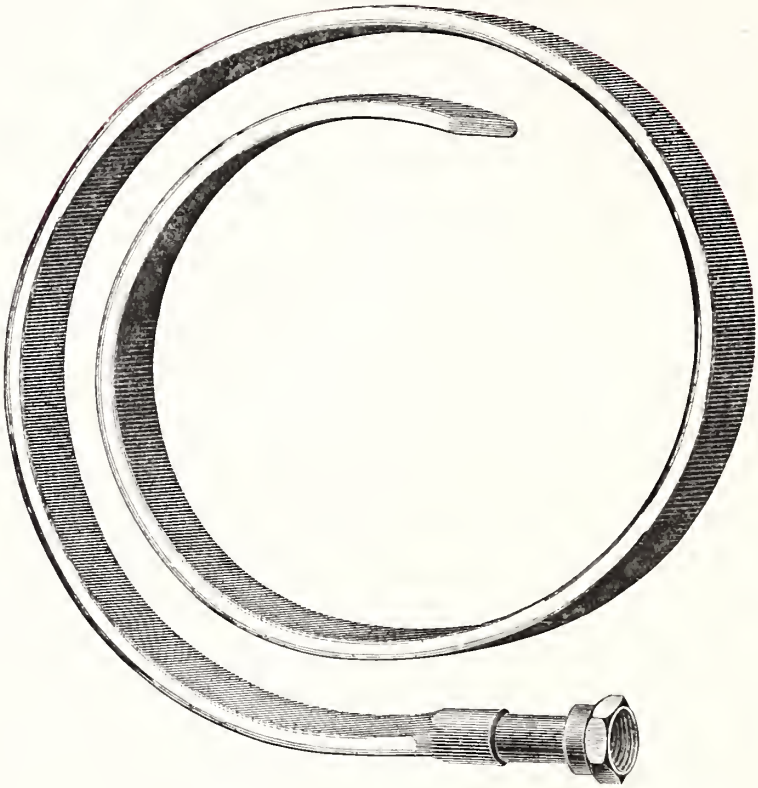

Fig. 474.

Each.....$4.00
Garter.

A very simple and effective device for preventing what is called "WATER-HAMMER," or the noise and jarring of Pipes by the sudden closing of Faucets and Valves.

Air Chambers put in for this purpose require periodical attention. This device is NOT AN AIR CHAMBER, as it will work as well when filled with water.

DIRECTIONS:

Attach to a half inch nipple on the supply pipe under sink or basin. One will do the work of an ordinary house.

THE CALDWELL PATENT HOSE STRAP.

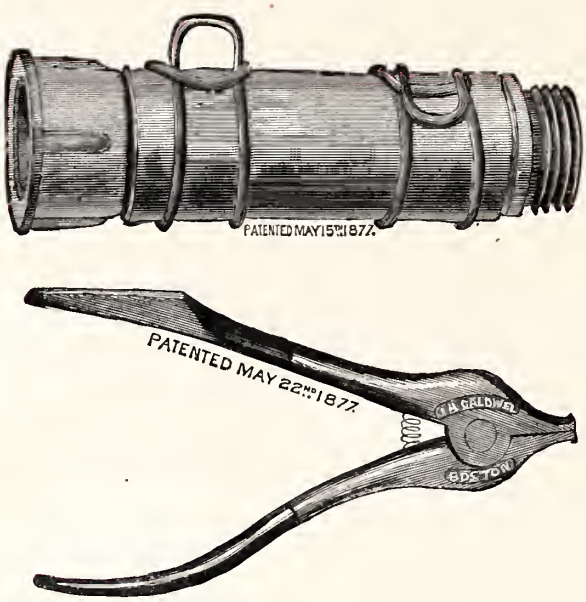

Fig. 617.

In applying these Straps, place the large end under the Hose, and bring the two ends together, carrying the small end through the large end, using the finished arm of the Fastener to bring the small end of the Strap sufficiently through to admit the nose of the Fasteners. By these means the Strap is tightened. This makes it far superior to any device yet invented for attaching Hose to Couplings.

Specially adapted for Railroad use, Air Brakes, Engine, Tender Hose, etc.

We are now making

"THE LEWIS" PATENT HYDRANTS AND STREET WASHERS.

WITH ANTI-WASTE AND DUPLEX VALVE.

NO WASTE WHEN OPEN.

THE WASTE VENT CLOSES BEFORE THE VALVE OPENS. To keep the ground as dry as possible, to prevent freezing, and to economize the great waste of water that would be lost in the ground if the valve was running and wasting at the same time as all others do when partly open.

REPAIRS MADE WITHOUT SHUTTING OFF THE WATER.

The Valve /simplest ever made/ is duplex, having AN AUXILIARY STOP WHICH AUTOMATICALLY SHUTS OFF THE WATER AT THE BOTTOM of Hydrant or Street Washer when the Valve is removed.

LEAST NUMBER OF PARTS!
EASIEST AND CHEAPEST TO REPAIR!
STRONGEST AND SIMPLEST IN THE WORLD!

These Hydrants and Street Washers HAVE BEEN THOROUGHLY TESTED FOR TEN YEARS. There are thousands now in use which are giving perfect satisfaction.
